Has fun in the sun damaged your skin?

If you have **basal cell carcinoma**, which is the most common form of skin cancer and is associated with sun exposure, we have a research study that may be of interest to you. The Center for Clinical and Cosmetic Research is conducting a clinical research study for males and females ages 18 and older with a certain type of basal cell carcinoma. We are looking for volunteers who have had no previous treatment on their current basal cell carcinoma(s) to participate in a research study evaluating an investigational treatment administered by microneedle arrays. Qualified participants will receive compensation for their time and travel.
